

R6E8A Pressure Report

24 hours ending at uploaded cutoff

From: Sep 26, 2026 10:21 AM EDT
To: Sep 27, 2026 10:21 AM EDT (end exclusive)
Latest complete HDF minute starts: Sep 27, 2026 10:20 AM EDT

4-8 HZ DOMINANCE

93.71%

1,311 of 1,399 complete minutes
Share of analyzed HDF minutes

COMPLETE-MINUTE COVERAGE

97.15%

41 minutes excluded
1,440 clock minutes in window

10+ MINUTE SEGMENTS

24

18 h 59 min
Consecutive 4-8-dominant minutes

DOMINANT FREQUENCY BAND - COMPLETE HDF MINUTES

Band	Complete minutes	Share of analyzed time
1-4 Hz	72	5.15%
4-8 Hz	1,311	93.71%
8-16 Hz	16	1.14%
16-20 Hz	0	0.00%

CONSECUTIVE 4-8 HZ SEGMENTS WITHIN THIS WINDOW

Each threshold includes longer segments; these rows are not additive.

Minimum segment length	Segments	Minutes in qualifying segments
10 minutes	24	1,139
30 minutes	8	835
60 minutes	7	801

Segments shorter than 10 minutes account for 172 additional 4-8-dominant minutes.

LONGEST 4-8 HZ SEGMENT IN THIS REPORT WINDOW

3 h 21 min

201 complete minutes. End time is exclusive.

Start: Sep 27, 2026 04:00 AM EDT

End: Sep 27, 2026 07:21 AM EDT

All segments are clipped to the report window. A missing or incomplete minute breaks a segment and is excluded from the analyzed-time denominator. Dominance is the highest mean PSD among the four listed bands.

Time Detail and Source Record

HDF spectral record and independent HDF / EHZ channel continuity

FOUR-HOUR BINS

Eastern start times; consecutive equal-duration bins end at the report cutoff.

Bin starts	Complete	Excluded	4-8 min	4-8 share
Sep 26 10:21 AM EDT	240	0	227	94.58%
Sep 26 02:21 PM EDT	240	0	199	82.92%
Sep 26 06:21 PM EDT	240	0	234	97.50%
Sep 26 10:21 PM EDT	240	0	234	97.50%
Sep 27 02:21 AM EDT	207	33	194	93.72%
Sep 27 06:21 AM EDT	232	8	223	96.12%

LATEST UPLOADED CHANNEL-STATUS WINDOW

Sep 27, 2026 10:10:00 AM EDT to Sep 27, 2026 10:21:42 AM EDT

Channel	Window coverage	Latest uploaded sample (Eastern)
HDF - pressure	99.074%	Sep 27, 2026 10:21:42 AM EDT
EHZ - vertical motion	99.036%	Sep 27, 2026 10:21:41 AM EDT

These continuity checks cover 11.7023 minutes only. HDF supplies the frequency statistics; EHZ remains a separate vertical-motion record. EHZ trailing 24-hour or seven-day spectral results are not present in this cache.

METHOD AND FIVE-CHECK VALIDATION

Complete 60-second clock-aligned HDF windows. Welch PSD: Hann window, 8-second segments, 50% overlap. The dominant band has the highest mean PSD among 1-4, 4-8, 8-16 and 16-20 Hz. This measures frequency dominance; no sound-pressure level, guidance index or exposure limit is inferred from band labels.

All five calculation gates passed: April 12 scope and historical totals; legacy duration thresholds; six-minute checkpoint edge; unique complete minute integrity; and duration reconciliation with the dated longest event. This report additionally verifies the cache hash, candidate binding and full-tail recount before deriving each trailing window.

Uploaded channel status

3c7f1ea1bcf348051768f3178222f7d010b8dc6590a0cc1a638a23db0dd8f651

Record: verified R6E8A recordings and the accepted minute archive. File identities, measurement timestamps and hashes are retained in the evidence record. The October 5 upload repeats previously included HDF recordings; it adds no post-cutoff minutes. Missing time through October 5 is unobserved and excluded.

*Account for up to 30 minutes of lag.
