

R6E8A Pressure Report

7 days ending at uploaded cutoff

From: Sep 20, 2026 10:21 AM EDT
To: Sep 27, 2026 10:21 AM EDT (end exclusive)
Latest complete HDF minute starts: Sep 27, 2026 10:20 AM EDT

4-8 HZ DOMINANCE

84.87%

8,520 of 10,039 complete minutes
Share of analyzed HDF minutes

COMPLETE-MINUTE COVERAGE

99.59%

41 minutes excluded
10,080 clock minutes in window

10+ MINUTE SEGMENTS

128

128 h 42 min
Consecutive 4-8-dominant minutes

DOMINANT FREQUENCY BAND - COMPLETE HDF MINUTES

Band	Complete minutes	Share of analyzed time
1-4 Hz	1,449	14.43%
4-8 Hz	8,520	84.87%
8-16 Hz	70	0.70%
16-20 Hz	0	0.00%

CONSECUTIVE 4-8 HZ SEGMENTS WITHIN THIS WINDOW

Each threshold includes longer segments; these rows are not additive.

Minimum segment length	Segments	Minutes in qualifying segments
10 minutes	128	7,722
30 minutes	58	6,534
60 minutes	36	5,616

Segments shorter than 10 minutes account for 798 additional 4-8-dominant minutes.

LONGEST 4-8 HZ SEGMENT IN THIS REPORT WINDOW

13 h 23 min

Start: Sep 20, 2026 10:39 PM EDT
End: Sep 21, 2026 12:02 PM EDT

803 complete minutes. End time is exclusive.

All segments are clipped to the report window. A missing or incomplete minute breaks a segment and is excluded from the analyzed-time denominator. Dominance is the highest mean PSD among the four listed bands.

Time Detail and Source Record

HDF spectral record and independent HDF / EHZ channel continuity

24-HOUR BINS

Eastern start times; consecutive equal-duration bins end at the report cutoff.

Bin starts	Complete	Excluded	4-8 min	4-8 share
Sep 20 10:21 AM EDT	1,440	0	1,408	97.78%
Sep 21 10:21 AM EDT	1,440	0	1,020	70.83%
Sep 22 10:21 AM EDT	1,440	0	982	68.19%
Sep 23 10:21 AM EDT	1,440	0	1,114	77.36%
Sep 24 10:21 AM EDT	1,440	0	1,347	93.54%
Sep 25 10:21 AM EDT	1,440	0	1,338	92.92%
Sep 26 10:21 AM EDT	1,399	41	1,311	93.71%

LATEST UPLOADED CHANNEL-STATUS WINDOW

Sep 27, 2026 10:10:00 AM EDT to Sep 27, 2026 10:21:42 AM EDT

Channel	Window coverage	Latest uploaded sample (Eastern)
HDF - pressure	99.074%	Sep 27, 2026 10:21:42 AM EDT
EHZ - vertical motion	99.036%	Sep 27, 2026 10:21:41 AM EDT

These continuity checks cover 11.7023 minutes only. HDF supplies the frequency statistics; EHZ remains a separate vertical-motion record. EHZ trailing 24-hour or seven-day spectral results are not present in this cache.

METHOD AND FIVE-CHECK VALIDATION

Complete 60-second clock-aligned HDF windows. Welch PSD: Hann window, 8-second segments, 50% overlap. The dominant band has the highest mean PSD among 1-4, 4-8, 8-16 and 16-20 Hz. This measures frequency dominance; no sound-pressure level, guidance index or exposure limit is inferred from band labels.

All five calculation gates passed: April 12 scope and historical totals; legacy duration thresholds; six-minute checkpoint edge; unique complete minute integrity; and duration reconciliation with the dated longest event. This report additionally verifies the cache hash, candidate binding and full-tail recount before deriving each trailing window.

INPUT FINGERPRINTS (SHA-256)

Verified calculation candidate

Uploaded channel status

3c7f1ea1bcf348051768f3178222f7d010b8dc6590a0cc1a638a23db0dd8f651

Record: verified R6E8A recordings and the accepted minute archive. File identities, measurement timestamps and hashes are retained in the evidence record. The October 5 upload repeats previously included HDF recordings; it adds no post-cutoff minutes. Missing time through October 5 is unobserved and excluded.

*Account for up to 30 minutes of lag.
