

R6E8A Pressure Report

Trailing 24 hours

From: Sep 24, 2026 11:53 PM EDT
To: Sep 25, 2026 11:53 PM EDT (end exclusive)
Latest complete HDF minute starts: Sep 25, 2026 11:52 PM EDT

4-8 HZ DOMINANCE

94.58%

1,362 of 1,440 complete minutes
Share of analyzed HDF minutes

COMPLETE-MINUTE COVERAGE

100.00%

0 minutes excluded
1,440 clock minutes in window

10+ MINUTE SEGMENTS

25

20 h 39 min
Consecutive 4-8-dominant minutes

DOMINANT FREQUENCY BAND - COMPLETE HDF MINUTES

Band	Complete minutes	Share of analyzed time
1-4 Hz	73	5.07%
4-8 Hz	1,362	94.58%
8-16 Hz	5	0.35%
16-20 Hz	0	0.00%

CONSECUTIVE 4-8 HZ SEGMENTS WITHIN THIS WINDOW

Each threshold includes longer segments; these rows are not additive.

Minimum segment length	Segments	Minutes in qualifying segments
10 minutes	25	1,239
30 minutes	14	1,059
60 minutes	7	769

Segments shorter than 10 minutes account for 123 additional 4-8-dominant minutes.

LONGEST 4-8 HZ SEGMENT IN THIS REPORT WINDOW

2 h 43 min

Start: Sep 25, 2026 02:23 PM EDT
End: Sep 25, 2026 05:06 PM EDT

163 complete minutes. End time is exclusive.

All segments are clipped to the report window. A missing or incomplete minute breaks a segment and is excluded from the analyzed-time denominator. Dominance is the highest mean PSD among the four listed bands.

Time Detail and Source Record

HDF spectral record and independent HDF / EHZ channel continuity

FOUR-HOUR BINS

Eastern start times; consecutive equal-duration bins end at the report cutoff.

Bin starts	Complete	Excluded	4-8 min	4-8 share
Sep 24 11:53 PM EDT	240	0	225	93.75%
Sep 25 03:53 AM EDT	240	0	236	98.33%
Sep 25 07:53 AM EDT	240	0	212	88.33%
Sep 25 11:53 AM EDT	240	0	226	94.17%
Sep 25 03:53 PM EDT	240	0	233	97.08%
Sep 25 07:53 PM EDT	240	0	230	95.83%

LATEST INDEPENDENT CHANNEL-STATUS WINDOW

Sep 26, 2026 12:34:18 AM EDT to Sep 26, 2026 12:54:18 AM EDT

Channel	Window coverage	Latest returned sample (Eastern)
HDF - pressure	99.999%	Sep 26, 2026 12:54:18 AM EDT
EHZ - vertical motion	99.999%	Sep 26, 2026 12:54:18 AM EDT

These continuity checks cover 20 minutes only. HDF supplies the frequency statistics; EHZ remains a separate vertical-motion record. EHZ trailing 24-hour or seven-day spectral results are not present in this cache.

METHOD AND FIVE-CHECK VALIDATION

Complete 60-second clock-aligned HDF windows. Welch PSD: Hann window, 8-second segments, 50% overlap. The dominant band has the highest mean PSD among 1-4, 4-8, 8-16 and 16-20 Hz. This measures frequency dominance; no sound-pressure level, guidance index or exposure limit is inferred from band labels.

All five calculation gates passed: April 12 scope and historical totals; legacy duration thresholds; six-minute checkpoint edge; unique complete minute integrity; and duration reconciliation with the dated longest event. This report additionally verifies the cache hash, candidate binding and full-tail recount before deriving each trailing window.
