R6E8A Pressure Report

24 hours ending at verified cutoff

From: Nov 05, 2026 08:36 PM EST
To: Nov 06, 2026 08:36 PM EST (end exclusive)

Latest complete HDF minute starts: Nov 06, 2026 08:35 PM EST

4-8 HZ DOMINANCE

64.03%

922 of 1,440 complete minutes

Share of analyzed HDF minutes

COMPLETE-MINUTE COVERAGE

100.00%

0 minutes excluded

1,440 clock minutes in window

10+ MINUTE SEGMENTS

11

14 h 49 min

Consecutive 4-8-dominant minutes

DOMINANT FREQUENCY BAND - COMPLETE HDF MINUTES

Band	Complete minutes	Share of analyzed time
1-4 Hz	518	35.97%
4-8 Hz	922	64.03%
8-16 Hz	0	0.00%
16-20 Hz	0	0.00%

CONSECUTIVE 4-8 HZ SEGMENTS WITHIN THIS WINDOW

Each threshold includes longer segments; these rows are not additive.

Minimum segment length	Segments	Minutes in qualifying segments
10 minutes	11	889
30 minutes	10	878
60 minutes	5	671

Segments shorter than 10 minutes account for 33 additional 4-8-dominant minutes.

LONGEST 4-8 HZ SEGMENT IN THIS REPORT WINDOW

3 h 51 min

Start: Nov 05, 2026 08:36 PM EST
End: Nov 06, 2026 12:27 AM EST

231 complete minutes. End time is exclusive. The run began before this window.

All segments are clipped to the report window. A missing or incomplete minute breaks a segment and is excluded from the analyzed-time denominator. Dominance is the highest mean PSD among the four listed bands.

Time Detail and Source Record

HDF spectral record and independent HDF / EHZ channel continuity

FOUR-HOUR BINS

Eastern start times; consecutive equal-duration bins end at the report cutoff.

Bin starts	Complete	Excluded	4-8 min	4-8 share
Nov 05 08:36 PM EST	240	0	237	98.75%
Nov 06 12:36 AM EST	240	0	233	97.08%
Nov 06 04:36 AM EST	240	0	11	4.58%
Nov 06 08:36 AM EST	240	0	0	0.00%
Nov 06 12:36 PM EST	240	0	207	86.25%
Nov 06 04:36 PM EST	240	0	234	97.50%

LATEST VERIFIED CHANNEL-STATUS WINDOW

Nov 06, 2026 08:20:51 PM EST to Nov 06, 2026 08:40:51 PM EST

Channel	Window coverage	Latest verified sample (Eastern)
HDF - pressure	99.999%	Nov 06, 2026 08:40:51 PM EST
EHZ - vertical motion	99.999%	Nov 06, 2026 08:40:51 PM EST

These continuity checks cover 20 minutes only. HDF supplies the frequency statistics; EHZ remains a separate vertical-motion record. EHZ trailing 24-hour or seven-day spectral results are not present in this cache.

METHOD AND FIVE-CHECK VALIDATION

Complete 60-second clock-aligned HDF windows. Welch PSD: Hann window, 8-second segments, 50% overlap. The dominant band has the highest mean PSD among 1-4, 4-8, 8-16 and 16-20 Hz. This measures frequency dominance; no sound-pressure level, guidance index or exposure limit is inferred from band labels.

All five calculation gates passed: April 12 scope and historical totals; legacy duration thresholds; six-minute checkpoint edge; unique complete minute integrity; and duration reconciliation with the dated longest event. This report additionally verifies the cache hash, candidate binding and full-tail recount before deriving each trailing window.

INPUT FINGERPRINTS (SHA-256)

Verified calculation candidate

`83201297582aca9a87bd22cbd00984012722dd6a19160eb130c8fd7196038b00`

Minute cache - canonical payload

`d95abe6fc95fb967fcf16e97655cf58a39b74e2d44b974679e29c6130ee121fb`

Verified channel status

`37db4c8bf468ff3c5645bc8f0d6db21e60c70a452e532dc13ade190077319c2b`

Record: verified R6E8A recordings and the accepted minute archive. File identities, measurement timestamps and hashes are retained in the evidence record. Available complete minutes extend the record. Offline and incomplete intervals remain unobserved and excluded pending the device-to-USB miniSEED patch. Repeated uploads count once.

*Account for up to 30 minutes of lag.
