DPD Case# 2510170221

R6E8A Pressure Report

7 days ending at verified cutoff

From: Oct 30, 2026 09:36 PM EDT

To: Nov 06, 2026 08:36 PM EST (end exclusive)

Latest complete HDF minute starts: Nov 06, 2026 08:35 PM EST

4-8 HZ DOMINANCE

90.93%

9,166 of 10,080 complete minutes

Share of analyzed HDF minutes

COMPLETE-MINUTE COVERAGE

100.00%

0 minutes excluded

10,080 clock minutes in window

10+ MINUTE SEGMENTS

121

149 h 17 min

Consecutive 4-8-dominant minutes

DOMINANT FREQUENCY BAND - COMPLETE HDF MINUTES

Band	Complete minutes	Share of analyzed time
1-4 Hz	883	8.76%
4-8 Hz	9,166	90.93%
8-16 Hz	31	0.31%
16-20 Hz	0	0.00%

CONSECUTIVE 4-8 HZ SEGMENTS WITHIN THIS WINDOW

Each threshold includes longer segments; these rows are not additive.

Minimum segment length	Segments	Minutes in qualifying segments
10 minutes	121	8,957
30 minutes	75	8,157
60 minutes	43	6,777

Segments shorter than 10 minutes account for 209 additional 4-8-dominant minutes.

LONGEST 4-8 HZ SEGMENT IN THIS REPORT WINDOW

9 h 41 min

Start: Nov 01, 2026 08:31 PM EST

End: Nov 02, 2026 06:12 AM EST

581 complete minutes. End time is exclusive.

All segments are clipped to the report window. A missing or incomplete minute breaks a segment and is excluded from the analyzed-time denominator. Dominance is the highest mean PSD among the four listed bands.

Time Detail and Source Record

HDF spectral record and independent HDF / EHZ channel continuity

24-HOUR BINS

Eastern start times; consecutive equal-duration bins end at the report cutoff.

Bin starts	Complete	Excluded	4-8 min	4-8 share
Oct 30 09:36 PM EDT	1,440	0	1,185	82.29%
Oct 31 09:36 PM EDT	1,440	0	1,423	98.82%
Nov 01 08:36 PM EST	1,440	0	1,413	98.12%
Nov 02 08:36 PM EST	1,440	0	1,413	98.12%
Nov 03 08:36 PM EST	1,440	0	1,404	97.50%
Nov 04 08:36 PM EST	1,440	0	1,406	97.64%
Nov 05 08:36 PM EST	1,440	0	922	64.03%

LATEST VERIFIED CHANNEL-STATUS WINDOW

Nov 06, 2026 08:20:51 PM EST to Nov 06, 2026 08:40:51 PM EST

Channel	Window coverage	Latest verified sample (Eastern)
HDF - pressure	99.999%	Nov 06, 2026 08:40:51 PM EST
EHZ - vertical motion	99.999%	Nov 06, 2026 08:40:51 PM EST

These continuity checks cover 20 minutes only. HDF supplies the frequency statistics; EHZ remains a separate vertical-motion record. EHZ trailing 24-hour or seven-day spectral results are not present in this cache.

METHOD AND FIVE-CHECK VALIDATION

Complete 60-second clock-aligned HDF windows. Welch PSD: Hann window, 8-second segments, 50% overlap. The dominant band has the highest mean PSD among 1-4, 4-8, 8-16 and 16-20 Hz. This measures frequency dominance; no sound-pressure level, guidance index or exposure limit is inferred from band labels.

All five calculation gates passed: April 12 scope and historical totals; legacy duration thresholds; six-minute checkpoint edge; unique complete minute integrity; and duration reconciliation with the dated longest event. This report additionally verifies the cache hash, candidate binding and full-tail recount before deriving each trailing window.

INPUT FINGERPRINTS (SHA-256)

Verified calculation candidate

`83201297582aca9a87bd22cbd00984012722dd6a19160eb130c8fd7196038b00`

Minute cache - canonical payload

`d95abe6fc95fb967fcf16e97655cf58a39b74e2d44b974679e29c6130ee121fb`

Verified channel status

`37db4c8bf468ff3c5645bc8f0d6db21e60c70a452e532dc13ade190077319c2b`

Record: verified R6E8A recordings and the accepted minute archive. File identities, measurement timestamps and hashes are retained in the evidence record. Available complete minutes extend the record. Offline and incomplete intervals remain unobserved and excluded pending the device-to-USB miniSEED patch. Repeated uploads count once.

*Account for up to 30 minutes of lag.
