

R6E8A Pressure Report

Trailing 7 days (168 hours)

From: Sep 18, 2026 11:06 AM EDT
To: Sep 25, 2026 11:06 AM EDT (end exclusive)
Latest complete HDF minute starts: Sep 25, 2026 11:05 AM EDT

4-8 HZ DOMINANCE

86.33%

8,700 of 10,078 complete minutes
Share of analyzed HDF minutes

COMPLETE-MINUTE COVERAGE

99.98%

2 minutes excluded
10,080 clock minutes in window

10+ MINUTE SEGMENTS

102

135 h 29 min
Consecutive 4-8-dominant minutes

DOMINANT FREQUENCY BAND - COMPLETE HDF MINUTES

Band	Complete minutes	Share of analyzed time
1-4 Hz	1,320	13.10%
4-8 Hz	8,700	86.33%
8-16 Hz	58	0.58%
16-20 Hz	0	0.00%

CONSECUTIVE 4-8 HZ SEGMENTS WITHIN THIS WINDOW

Each threshold includes longer segments; these rows are not additive.

Minimum segment length	Segments	Minutes in qualifying segments
10 minutes	102	8,129
30 minutes	51	7,271
60 minutes	33	6,520

Segments shorter than 10 minutes account for 571 additional 4-8-dominant minutes.

LONGEST 4-8 HZ SEGMENT IN THIS REPORT WINDOW

13 h 23 min

Start: Sep 20, 2026 10:39 PM EDT
End: Sep 21, 2026 12:02 PM EDT

803 complete minutes. End time is exclusive.

All segments are clipped to the report window. A missing or incomplete minute breaks a segment and is excluded from the analyzed-time denominator. Dominance is the highest mean PSD among the four listed bands.

Time Detail and Source Record

HDF spectral record and independent HDF / EHZ channel continuity

24-HOUR BINS

Eastern start times; consecutive equal-duration bins end at the report cutoff.

Bin starts	Complete	Excluded	4-8 min	4-8 share
Sep 18 11:06 AM EDT	1,440	0	1,432	99.44%
Sep 19 11:06 AM EDT	1,438	2	1,404	97.64%
Sep 20 11:06 AM EDT	1,440	0	1,412	98.06%
Sep 21 11:06 AM EDT	1,440	0	1,015	70.49%
Sep 22 11:06 AM EDT	1,440	0	984	68.33%
Sep 23 11:06 AM EDT	1,440	0	1,111	77.15%
Sep 24 11:06 AM EDT	1,440	0	1,342	93.19%

LATEST INDEPENDENT CHANNEL-STATUS WINDOW

Sep 25, 2026 03:53:54 PM EDT to Sep 25, 2026 04:13:54 PM EDT

Channel	Window coverage	Latest returned sample (Eastern)
HDF - pressure	99.999%	Sep 25, 2026 04:13:54 PM EDT
EHZ - vertical motion	99.999%	Sep 25, 2026 04:13:54 PM EDT

These continuity checks cover 20 minutes only. HDF supplies the frequency statistics; EHZ remains a separate vertical-motion record. EHZ trailing 24-hour or seven-day spectral results are not present in this cache.

METHOD AND FIVE-CHECK VALIDATION

Complete 60-second clock-aligned HDF windows. Welch PSD: Hann window, 8-second segments, 50% overlap. The dominant band has the highest mean PSD among 1-4, 4-8, 8-16 and 16-20 Hz. This measures frequency dominance; no sound-pressure level, guidance index or exposure limit is inferred from band labels.

All five calculation gates passed: April 12 scope and historical totals; legacy duration thresholds; six-minute checkpoint edge; unique complete minute integrity; and duration reconciliation with the dated longest event. This report additionally verifies the cache hash, candidate binding and full-tail recount before deriving each trailing window.
