

R6E8A Pressure Report

Trailing 24 hours

From: Sep 23, 2026 03:29 AM EDT
To: Sep 24, 2026 03:29 AM EDT (end exclusive)
Latest complete HDF minute starts: Sep 24, 2026 03:28 AM EDT

4-8 HZ DOMINANCE

77.92%

1,122 of 1,440 complete minutes
Share of analyzed HDF minutes

COMPLETE-MINUTE COVERAGE

100.00%

0 minutes excluded
1,440 clock minutes in window

10+ MINUTE SEGMENTS

17

16 h 41 min
Consecutive 4-8-dominant minutes

DOMINANT FREQUENCY BAND - COMPLETE HDF MINUTES

Band	Complete minutes	Share of analyzed time
1-4 Hz	312	21.67%
4-8 Hz	1,122	77.92%
8-16 Hz	6	0.42%
16-20 Hz	0	0.00%

CONSECUTIVE 4-8 HZ SEGMENTS WITHIN THIS WINDOW

Each threshold includes longer segments; these rows are not additive.

Minimum segment length	Segments	Minutes in qualifying segments
10 minutes	17	1,001
30 minutes	7	821
60 minutes	6	777

Segments shorter than 10 minutes account for 121 additional 4-8-dominant minutes.

LONGEST 4-8 HZ SEGMENT IN THIS REPORT WINDOW

4 h 35 min

Start: Sep 23, 2026 10:34 PM EDT
End: Sep 24, 2026 03:09 AM EDT

275 complete minutes. End time is exclusive.

All segments are clipped to the report window. A missing or incomplete minute breaks a segment and is excluded from the analyzed-time denominator. Dominance is the highest mean PSD among the four listed bands.

Time Detail and Source Record

HDF spectral record and independent HDF / EHZ channel continuity

FOUR-HOUR BINS

Eastern start times; consecutive equal-duration bins end at the report cutoff.

Bin starts	Complete	Excluded	4-8 min	4-8 share
Sep 23 03:29 AM EDT	240	0	239	99.58%
Sep 23 07:29 AM EDT	240	0	233	97.08%
Sep 23 11:29 AM EDT	240	0	222	92.50%
Sep 23 03:29 PM EDT	240	0	40	16.67%
Sep 23 07:29 PM EDT	240	0	149	62.08%
Sep 23 11:29 PM EDT	240	0	239	99.58%

LATEST INDEPENDENT CHANNEL-STATUS WINDOW

Sep 24, 2026 04:55:08 PM EDT to Sep 24, 2026 05:15:08 PM EDT

Channel	Window coverage	Latest returned sample (Eastern)
HDF - pressure	99.999%	Sep 24, 2026 05:15:08 PM EDT
EHZ - vertical motion	99.999%	Sep 24, 2026 05:15:08 PM EDT

These continuity checks cover 20 minutes only. HDF supplies the frequency statistics; EHZ remains a separate vertical-motion record. EHZ trailing 24-hour or seven-day spectral results are not present in this cache.

METHOD AND FIVE-CHECK VALIDATION

Complete 60-second clock-aligned HDF windows. Welch PSD: Hann window, 8-second segments, 50% overlap. The dominant band has the highest mean PSD among 1-4, 4-8, 8-16 and 16-20 Hz. This measures frequency dominance; no sound-pressure level, guidance index or exposure limit is inferred from band labels.

All five calculation gates passed: April 12 scope and historical totals; legacy duration thresholds; six-minute checkpoint edge; unique complete minute integrity; and duration reconciliation with the dated longest event. This report additionally verifies the cache hash, candidate binding and full-tail recount before deriving each trailing window.
