

R6E8A Pressure Report

24 hours ending at verified cutoff

From: Oct 08, 2026 04:03 PM EDT
To: Oct 09, 2026 04:03 PM EDT (end exclusive)
Latest complete HDF minute starts: Oct 09, 2026 04:02 PM EDT

4-8 HZ DOMINANCE

97.92%

1,410 of 1,440 complete minutes
Share of analyzed HDF minutes

COMPLETE-MINUTE COVERAGE

100.00%

0 minutes excluded
1,440 clock minutes in window

10+ MINUTE SEGMENTS

14

23 h 01 min
Consecutive 4-8-dominant minutes

DOMINANT FREQUENCY BAND - COMPLETE HDF MINUTES

Band	Complete minutes	Share of analyzed time
1-4 Hz	22	1.53%
4-8 Hz	1,410	97.92%
8-16 Hz	8	0.56%
16-20 Hz	0	0.00%

CONSECUTIVE 4-8 HZ SEGMENTS WITHIN THIS WINDOW

Each threshold includes longer segments; these rows are not additive.

Minimum segment length	Segments	Minutes in qualifying segments
10 minutes	14	1,381
30 minutes	9	1,268
60 minutes	5	1,096

Segments shorter than 10 minutes account for 29 additional 4-8-dominant minutes.

LONGEST 4-8 HZ SEGMENT IN THIS REPORT WINDOW

8 h 03 min

Start: Oct 08, 2026 07:54 PM EDT
End: Oct 09, 2026 03:57 AM EDT

483 complete minutes. End time is exclusive.

All segments are clipped to the report window. A missing or incomplete minute breaks a segment and is excluded from the analyzed-time denominator. Dominance is the highest mean PSD among the four listed bands.

Time Detail and Source Record

HDF spectral record and independent HDF / EHZ channel continuity

FOUR-HOUR BINS

Eastern start times; consecutive equal-duration bins end at the report cutoff.

Bin starts	Complete	Excluded	4-8 min	4-8 share
Oct 08 04:03 PM EDT	240	0	231	96.25%
Oct 08 08:03 PM EDT	240	0	240	100.00%
Oct 09 12:03 AM EDT	240	0	237	98.75%
Oct 09 04:03 AM EDT	240	0	239	99.58%
Oct 09 08:03 AM EDT	240	0	232	96.67%
Oct 09 12:03 PM EDT	240	0	231	96.25%

LATEST VERIFIED CHANNEL-STATUS WINDOW

Oct 09, 2026 03:44:04 PM EDT to Oct 09, 2026 04:04:04 PM EDT

Channel	Window coverage	Latest verified sample (Eastern)
HDF - pressure	99.999%	Oct 09, 2026 04:04:04 PM EDT
EHZ - vertical motion	99.999%	Oct 09, 2026 04:04:04 PM EDT

These continuity checks cover 20 minutes only. HDF supplies the frequency statistics; EHZ remains a separate vertical-motion record. EHZ trailing 24-hour or seven-day spectral results are not present in this cache.

METHOD AND FIVE-CHECK VALIDATION

Complete 60-second clock-aligned HDF windows. Welch PSD: Hann window, 8-second segments, 50% overlap. The dominant band has the highest mean PSD among 1-4, 4-8, 8-16 and 16-20 Hz. This measures frequency dominance; no sound-pressure level, guidance index or exposure limit is inferred from band labels.

All five calculation gates passed: April 12 scope and historical totals; legacy duration thresholds; six-minute checkpoint edge; unique complete minute integrity; and duration reconciliation with the dated longest event. This report additionally verifies the cache hash, candidate binding and full-tail recount before deriving each trailing window.

Verified channel status

61a9a55cbe4e03bd7db4ec0cff407fcc9f94356faf55e26ebe1c6b7bbfc5d9c3

Record: verified R6E8A recordings and the accepted minute archive. File identities, measurement timestamps and hashes are retained in the evidence record. Available complete minutes extend the record. Offline and incomplete intervals remain unobserved and excluded pending the device-to-USB miniSEED patch. Repeated uploads count once.

*Account for up to 30 minutes of lag.
