DPD Case# 2510170221

R6E8A Pressure Report

7 days ending at verified cutoff

From: Oct 08, 2026 07:50 AM EDT

To: Oct 15, 2026 07:50 AM EDT (end exclusive)

Latest complete HDF minute starts: Oct 15, 2026 07:49 AM EDT

4-8 HZ DOMINANCE

97.25%

9,688 of 9,962 complete minutes

Share of analyzed HDF minutes

COMPLETE-MINUTE COVERAGE

98.83%

118 minutes excluded

10,080 clock minutes in window

10+ MINUTE SEGMENTS

103

156 h 45 min

Consecutive 4-8-dominant minutes

DOMINANT FREQUENCY BAND - COMPLETE HDF MINUTES

Band	Complete minutes	Share of analyzed time
1-4 Hz	214	2.15%
4-8 Hz	9,688	97.25%
8-16 Hz	60	0.60%
16-20 Hz	0	0.00%

CONSECUTIVE 4-8 HZ SEGMENTS WITHIN THIS WINDOW

Each threshold includes longer segments; these rows are not additive.

Minimum segment length	Segments	Minutes in qualifying segments
10 minutes	103	9,405
30 minutes	55	8,496
60 minutes	36	7,712

Segments shorter than 10 minutes account for 283 additional 4-8-dominant minutes.

LONGEST 4-8 HZ SEGMENT IN THIS REPORT WINDOW

16 h 55 min

Start: Oct 10, 2026 09:21 PM EDT

End: Oct 11, 2026 02:16 PM EDT

1,015 complete minutes. End time is exclusive.

All segments are clipped to the report window. A missing or incomplete minute breaks a segment and is excluded from the analyzed-time denominator. Dominance is the highest mean PSD among the four listed bands.

Time Detail and Source Record

HDF spectral record and independent HDF / EHZ channel continuity

24-HOUR BINS

Eastern start times; consecutive equal-duration bins end at the report cutoff.

Bin starts	Complete	Excluded	4-8 min	4-8 share
Oct 08 07:50 AM EDT	1,331	109	1,271	95.49%
Oct 09 07:50 AM EDT	1,438	2	1,371	95.34%
Oct 10 07:50 AM EDT	1,440	0	1,426	99.03%
Oct 11 07:50 AM EDT	1,438	2	1,420	98.75%
Oct 12 07:50 AM EDT	1,440	0	1,416	98.33%
Oct 13 07:50 AM EDT	1,440	0	1,378	95.69%
Oct 14 07:50 AM EDT	1,435	5	1,406	97.98%

LATEST VERIFIED CHANNEL-STATUS WINDOW

Oct 15, 2026 07:30:54 AM EDT to Oct 15, 2026 07:50:54 AM EDT

Channel	Window coverage	Latest verified sample (Eastern)
HDF - pressure	100.000%	Oct 15, 2026 07:50:54 AM EDT
EHZ - vertical motion	100.000%	Oct 15, 2026 07:50:54 AM EDT

These continuity checks cover 20 minutes only. HDF supplies the frequency statistics; EHZ remains a separate vertical-motion record. EHZ trailing 24-hour or seven-day spectral results are not present in this cache.

METHOD AND FIVE-CHECK VALIDATION

Complete 60-second clock-aligned HDF windows. Welch PSD: Hann window, 8-second segments, 50% overlap. The dominant band has the highest mean PSD among 1-4, 4-8, 8-16 and 16-20 Hz. This measures frequency dominance; no sound-pressure level, guidance index or exposure limit is inferred from band labels.

All five calculation gates passed: April 12 scope and historical totals; legacy duration thresholds; six-minute checkpoint edge; unique complete minute integrity; and duration reconciliation with the dated longest event. This report additionally verifies the cache hash, candidate binding and full-tail recount before deriving each trailing window.

INPUT FINGERPRINTS (SHA-256)

Verified calculation candidate

`01635dd49c2a0cae51be0e7dd75088f691f811e457c486a1a447b40e9bd53159`

Minute cache - canonical payload

`4fee61dc54f79f859e33c070f67c65a8c8198fb6ab9048e28cf1636a2dbd28b6`

Verified channel status

`a9c4ae8aeac1848d731836c71a7ec0c81fd5795c04a3b971bf17d6bf6c155dc2`

Record: verified R6E8A recordings and the accepted minute archive. File identities, measurement timestamps and hashes are retained in the evidence record. Available complete minutes extend the record. Offline and incomplete intervals remain unobserved and excluded pending the device-to-USB miniSEED patch. Repeated uploads count once.

*Account for up to 30 minutes of lag.
