DPD Case# 2510170221

R6E8A Pressure Report

7 days ending at verified cutoff

From: Oct 04, 2026 05:22 PM EDT

To: Oct 11, 2026 05:22 PM EDT (end exclusive)

Latest complete HDF minute starts: Oct 11, 2026 05:21 PM EDT

4-8 HZ DOMINANCE

96.90%

4,633 of 4,781 complete minutes

Share of analyzed HDF minutes

COMPLETE-MINUTE COVERAGE

47.43%

5,299 minutes excluded

10,080 clock minutes in window

10+ MINUTE SEGMENTS

52

73 h 57 min

Consecutive 4-8-dominant minutes

DOMINANT FREQUENCY BAND - COMPLETE HDF MINUTES

Band	Complete minutes	Share of analyzed time
1-4 Hz	131	2.74%
4-8 Hz	4,633	96.90%
8-16 Hz	17	0.36%
16-20 Hz	0	0.00%

CONSECUTIVE 4-8 HZ SEGMENTS WITHIN THIS WINDOW

Each threshold includes longer segments; these rows are not additive.

Minimum segment length	Segments	Minutes in qualifying segments
10 minutes	52	4,437
30 minutes	22	3,882
60 minutes	13	3,524

Segments shorter than 10 minutes account for 196 additional 4-8-dominant minutes.

LONGEST 4-8 HZ SEGMENT IN THIS REPORT WINDOW

16 h 55 min

Start: Oct 10, 2026 09:21 PM EDT

End: Oct 11, 2026 02:16 PM EDT

1,015 complete minutes. End time is exclusive.

All segments are clipped to the report window. A missing or incomplete minute breaks a segment and is excluded from the analyzed-time denominator. Dominance is the highest mean PSD among the four listed bands.

Time Detail and Source Record

HDF spectral record and independent HDF / EHZ channel continuity

24-HOUR BINS

Eastern start times; consecutive equal-duration bins end at the report cutoff.

Bin starts	Complete	Excluded	4-8 min	4-8 share
Oct 04 05:22 PM EDT	0	1,440	0	No complete data
Oct 05 05:22 PM EDT	0	1,440	0	No complete data
Oct 06 05:22 PM EDT	0	1,440	0	No complete data
Oct 07 05:22 PM EDT	463	977	411	88.77%
Oct 08 05:22 PM EDT	1,440	0	1,412	98.06%
Oct 09 05:22 PM EDT	1,438	2	1,379	95.90%
Oct 10 05:22 PM EDT	1,440	0	1,431	99.38%

LATEST VERIFIED CHANNEL-STATUS WINDOW

Oct 11, 2026 05:02:49 PM EDT to Oct 11, 2026 05:22:49 PM EDT

Channel	Window coverage	Latest verified sample (Eastern)
HDF - pressure	100.000%	Oct 11, 2026 05:22:49 PM EDT
EHZ - vertical motion	100.000%	Oct 11, 2026 05:22:49 PM EDT

These continuity checks cover 20 minutes only. HDF supplies the frequency statistics; EHZ remains a separate vertical-motion record. EHZ trailing 24-hour or seven-day spectral results are not present in this cache.

METHOD AND FIVE-CHECK VALIDATION

Complete 60-second clock-aligned HDF windows. Welch PSD: Hann window, 8-second segments, 50% overlap. The dominant band has the highest mean PSD among 1-4, 4-8, 8-16 and 16-20 Hz. This measures frequency dominance; no sound-pressure level, guidance index or exposure limit is inferred from band labels.

All five calculation gates passed: April 12 scope and historical totals; legacy duration thresholds; six-minute checkpoint edge; unique complete minute integrity; and duration reconciliation with the dated longest event. This report additionally verifies the cache hash, candidate binding and full-tail recount before deriving each trailing window.

INPUT FINGERPRINTS (SHA-256)

Verified calculation candidate

Minute cache - canonical payload

`8a8c19059e3b7e72cac1e796cc9871937e40c4d25a270b43ead9008cb035def8`

Verified channel status

`2279679d24da410d4802252362836239133ce0546a613b2e924c4cb4453bc19d`

Record: verified R6E8A recordings and the accepted minute archive. File identities, measurement timestamps and hashes are retained in the evidence record. Available complete minutes extend the record. Offline and incomplete intervals remain unobserved and excluded pending the device-to-USB miniSEED patch. Repeated uploads count once.

*Account for up to 30 minutes of lag.
